

## Liquid Fertilizer Distribution Systems

### Pattison's Auto Rate and Sectional Control Systems

Provide on-the-go variable rate and sectional control for your liquid fertilizer application

*Our last three seeders we've run have had a sectional control liquid delivery system from Pattison. We've run delivery systems with six sections to apply our nitrogen on all three seeders with widths from 57-61'. The sectional control has cut our overlap down 3-8% depending on field shape and size. The cost savings from not over applying is only one of the benefits. The other noticeable benefit is the reduction in lodging from the overlap areas. The staff at Pattison has always been helpful anytime day or night to resolve any problems.*

- Danny and Clayton Churn, Waseca SK, NSC Farms Ltd
