

Pattison Inductor Pro II, Spray Management Systems is fast and accurate

Inductor Pro: The next generation of spray management systems, that greatly reduces sprayer fill time, allowing the operator to spend more time spraying. The Pro has high capacity induction system, which can be attached to up to 3 separate bulk containers at the same time. As the sprayer is being filled through the 3" fill line, product is inducted straight in to the fill line. Product that is being drawn from each bulk container is metered. The on board batch tank, also allows the operator to empty and rinse jugs quickly. This systems can be easily integrated into existing systems. Inductor Pro II: The Pro II offers all the same features as the Pro, but has separate batch control valves that automatically close once the predetermined amount of chemical has been transferred. The Monitors system can operate two separate valves/products. Dimensions - 60"W x 48"D x 42"H Weight - 210 lbs.

Batch tank with a capacity of 30 USG, allows for the easy mix of powders and liquids. The tanks rinse system, with integrated fresh water quickly cleans jugs removing all contents of the tank.

Placed on a poly pallet, the corrosion resistant powder coated painted components will look new for many years to come. Instructions are placed on panel for easy access and readability.

Proven performance - powered by a 13 hp PowerPro electric start motor the 3 in. Hypro pump will deliver up to 440 gpm.

High quality Banjo 3 in. leak proof manifold style fittings will provide years of trouble free service. Raised handles on all valves for easy maneuvering.

The optional, fully integrated venturi system allows the operator to be connected up to three bulk containers at the same time. Product is drawn through individual meters which are designed to accurately measure specific products.

Flo Pro II Monitor

The Flo Pro II monitor, is capable of monitoring two individual meters. Pre-programmed the monitor will activate batch control valves to open, allowing product to be metered. When the desired amount of product has passed through the meter it will automatically close the valve.

Inductor Pro's can be upgraded to the new Mag meter. The Mag meter provides more accuracy than traditional impeller style meters when being used with higher viscosity water based products.
