

# Pattison Inductors

Featuring the Pattison Inductor systems, the next generation of spray management equipment

Shown above is the Pattison custom built spray trailer being used to fill the new Connect SP120, Dot ready implement. On board the trailer is the Pattison Inductor Pro II and hose reel.

*The Inductor Pro has enabled us to significantly cut back on loading time. We are able to fill a 1200gal sprayer in minutes, without hot loading. In doing this, we are also able to manage the job with only one person. Most stops are less than 10 minutes, and with multiple product hoses, it's not only faster but we are also handling the chemical much less.*
