

## Field Equipment

The PLS5210 Tow behind wagon with the optional Soucy track and torsion system

*On our farm soil compaction has been a serious problem. Starting off with even germination and emergence is very important to us. After switching from wheels to tracks we believe this is the answer. The crops got off to a great start. The tracks on the Pattison Caddy are designed very well. They run extremely smooth and trouble free. Highly recommend using these track systems on all pieces of machinery.*
