Electric Powered Pump c/w Full Service Tank Farm Package

DESCRIPTION/ CAPACITY	Model
Electric powered pump	PPBAM47530
Plumbing package	BAMEPSP

This uniquely designed systems, allows the operator to fill, empty and or recirculate product from multiple tanks, and fill/unload trucks and trailers. The 7.5 HP single phase electric pump is coupled to a 3" Banjo Poly pump. Placed on a corrosion resistant powder coated painted panel will look new for many years. Plumbing package includes two, 3", three way valves, flanged fittings, and sweeps. Call today for your own custom designed pumping station.

"New" - On Farm Blending Station

This on farm blending station allows the operator to quickly blend fertilizer from individual tanks. The 3" Banjo poly pump is powered by a 7.5 HP electric motor and product is accurately measured through the 3" Banjo flow meter. The system is also designed to fill and unload trucks, and fill, empty and recirculate product from multiple tanks. The system in the picture is built to be used with three tanks, but can be easily modified to accommodate as many tanks that are required. Pre-assembled on the powder coated stand, it will look new and withstand many years of use in the corrosive environment.
